Lighting the Other \(\frac{3}{4}\) of the Tree

The branches of the tree are proportional in size to the population of the regions as labeled. The bulbs on each branch represent the “gospel watts” available per person times the population in the region.

“Gospel Watts” Per Person

The gospel wattage formula includes population, number of Christians (evangelical, charismatic, and other), church growth rate, and level of persecution. See www.gmi.org/wattageformula. Comments welcome.

\[
\frac{3}{4} \text{ of this tree is very poorly lit, and most of that three-fourths is in Asia.}
\]

What personal connections do you have in the 3/4 of the world where gospel wattage is low? If you know a missionary or a local believer there, can you tell him/her that this graphic reminded you of the need for Christmas light where he/she is?

OPERATION WORLD

Choose one of the “3/4” branches and pray for more gospel wattage in that region. Operation World has prayer resources by region and by country, including 2-minute prayer videos on many countries. www.operationworld.org/prayer-videos

Of the many requests for donations you are receiving during the Christmas season, does the Lord want you to steer a larger proportion of your giving toward lighting the 3/4 regions—Asia and North Africa?
